PROJECT GOAL AND OBJECTIVES WORKSHEET

1. The application is increasing income for laboratories and especially modern and startups ones by 30% to 60% and that stand for availability and marketing.

2. The application is made for customer who did not able to find out the unique medical tests.

3. It helps to show the same test and compare it between other laboratories in terms of cost, address, efficiency, feedback from the others and confidence.

4. It keeps track the test which you apply what stages it arrives and when I can receive the results and Is it a problem in samples which is taken from patient.

5. The team should make contrast with different labs and make pages for marketing.

6. The UI/UX for application should be very simple for old people who can not use tech easily.

7. The team can add some features like ask a remote taking samples but this may with some labs .

8. The application may have 6 to 10 pages and form for applicants

9. By 2023, the application will has different contrasts with labs and especially modern and small ones which almost them did not have mobile or web, customers and applicants, advertising agencies and may be some agencies for remote services ,also we will have many data for different tests and their costs

10. The future plans is that we can link clinics and their examination with our application to find out the common tests and recommend laps for our clients from patient ,laps and Doctors too.
